

FocusFox GATE Image Uploader: Team Setup & User Guide

Welcome to the **FocusFox GATE Image Uploader** tool! This utility helps you select local images and upload/map them directly to questions and options in our database.

Follow this step-by-step guide to extract, set up, and run the application.

■ Table of Contents

1. [Prerequisites: Python Installation](#)
 2. [Extracting the Application](#)
 3. [Configuration \(.env file\)](#)
 4. [Installing Dependencies](#)
 5. [Running the Application](#)
 6. [How to Use the Interface](#)
-

1. Prerequisites: Python Installation

This application requires **Python 3.10 or higher**. Follow these steps to install it:

For Windows:

1. Go to the official Python download page: [Python.org Downloads](#).
 2. Click the yellow button to download the latest version of Python for Windows.
 3. **CRITICAL STEP:** Run the downloaded installer. At the very bottom of the installer window, make sure to check the box that says:
 4. **"Add python.exe to PATH"** (or **"Add Python to environment variables"**).
 5. *If you miss this step, your command prompt won't recognize Python commands.*
 6. Click **Install Now**.
 7. Once finished, verify the installation:
 8. Open **Command Prompt** (press Win + R, type cmd, and press Enter).
 9. Run the following command: `cmd python --version`
 10. You should see something like `Python 3.10.x` or `Python 3.11.x` printed out.
-

2. Extracting the Application

1. Locate the provided `.zip` folder (e.g., `gate-img-uploader.zip`).
2. Right-click the `.zip` file and select **Extract All...**
3. Choose a destination folder (e.g., your Desktop or a Documents folder) and click **Extract**.
4. Open the extracted folder. You should see files like `main.py`, `gui.py`, and `requirements.txt`.

3. Configuration (.env file)

The application needs access keys to connect to the database and image hosting service.

1. In the extracted folder, verify if there is a file named `.env`.
2. *Note: If Windows hides file extensions, it might just look like a file named `.env` or "Configuration Settings".*
3. If the `.env` file is missing, create a new text file, name it `.env`, and paste the credentials provided by the team leader:
`env SUPABASE_URL=your_supabase_url_here`
`SUPABASE_KEY=your_supabase_key_here`
`IMAGEKIT_PUBLIC_KEY=your_imagekit_public_key_here`
`IMAGEKIT_PRIVATE_KEY=your_imagekit_private_key_here`
`IMAGEKIT_URL_ENDPOINT=your_imagekit_url_endpoint_here`
4. Save and close the file.

4. Installing Dependencies

Before launching the app, you need to install the required Python packages:

1. Open **Command Prompt** in the project folder.
2. *Tip: You can do this by clicking on the folder path address bar in Windows File Explorer, typing `cmd`, and hitting Enter.*
3. Type the following command and press Enter: `cmd pip install -r requirements.txt`
4. Wait for the installation to finish. This downloads the GUI components (`customtkinter`), image processing utilities (`pillow`), and database/image APIs.

5. Running the Application

To start the graphical interface:

1. In the same Command Prompt window, run: `cmd python main.py`
2. Alternatively, you can double-click the `main.py` file to launch it directly (if your computer is configured to open `.py` files with Python).

6. How to Use the Interface

Once launched, the application shows a dark-themed dashboard divided into two main columns:

```
graph TD
    A[Select Year] --> B[Select Paper/Exam Set]
    B --> C[Select Subject]
    C --> D[Select Question Number]
    D --> E[Check Preview / Read Texts]
    E --> F[Select Target Image Association]
    F --> G[Choose Local Images & Upload]
```

Step 6.1: Metadata Selection (Left Panel)

1. **Year:** Select the exam year from the dropdown.
2. **Paper/Exam Set:** Choose the specific exam paper set.
3. **Subject:** Choose the subject (or select "All Subjects").
4. **Question Number:** Select the question number you are uploading images for.
5. *Once selected, the Question Text Preview and Explanation Preview will load automatically so you can verify you have selected the correct question.*
6. **Target Image Association:** Choose where the image should go:
7. **Question** (for the main question body)
8. **Option A, Option B, Option C, or Option D**
9. **Explanation**

Step 6.2: Selecting and Managing Images (Right Panel)

1. Click **Choose Images** to open a file dialog and select one or more images from your local machine.
2. The selected images will appear as thumbnails in the **Selected Local Images to Upload** container.
3. If you select the wrong image, click **Clear Selected** to start over.
4. The panel also displays **Existing Images in Database** for the selected question/option.
5. To clear out existing images in the cloud for this target, click the red **Delete All Existing Images for Target** button.

Step 6.3: Uploading

1. If you want to automatically overwrite/replace any old images with the new ones you've selected, check the **Replace existing database images** box.
2. Click the green **Upload & Map Images** button.
3. The progress bar at the bottom will track the upload. Once complete, you will receive a success pop-up.
